

Pillow Block Ball Bearing Unit

Pillow block ball bearing units are designed for mounting on surfaces parallel to the shaft axis. The units consist of a housing with a bearing insert, providing support and alignment for rotating shafts.

Overview

Reliable Shaft Support Solutions

These pillow block ball bearing units are engineered for mounting on surfaces parallel to the shaft axis, providing essential support and alignment for rotating machinery. Each unit features a robust housing combined with a high-quality bearing insert, ensuring smooth operation in demanding environments. Pre-lubricated and sealed against contaminants, these units are designed for extended service life and consistent performance in industrial settings.

Technical Details

Mounting Orientation	Parallel to shaft axis
Maintenance Features	Pre-lubricated, Sealed

Applications

Typical Industrial Applications

- Conveyor systems
- Agricultural machinery
- General industrial shaft support
