

Pillow Block Bearing Unit

Pillow block bearing units are mounted bearings commonly used to support rotating shafts. The unit has a self-aligning bearing, which allows for slight misalignments during operation.

Product Overview

Industrial Pillow Block Bearing Unit

This pillow block bearing unit is designed for reliable support of rotating shafts in various industrial applications. Featuring a durable zinc housing and a self-aligning bearing insert, it accommodates minor shaft misalignments during operation. The unit is engineered for straightforward mounting to flat surfaces and utilizes a set screw locking mechanism to ensure secure power transmission.

Technical Specifications

Housing Material	Zinc
Bearing Type	Self-aligning
Locking Method	Set screw
Model Identifiers	FL002, KOO
