

Pillow Block Bearing Unit

Pillow block bearings are mounted bearing units that support a rotating shaft using compatible bearings and accessories. Typically constructed from cast iron or cast steel, these bearings are designed for applications requiring high load capacity and durability.

Product Overview

High-Performance Pillow Block Bearing

Pillow block bearings, often referred to as plummer blocks, are essential mounted bearing units designed to provide robust support for rotating shafts. Engineered for demanding environments, these units feature durable housing typically constructed from cast iron or cast steel to ensure longevity. They are an ideal solution for applications requiring high load capacity, making them a staple in conveyor systems, agricultural machinery, and heavy-duty industrial equipment.

Technical Specifications

Housing Material	Cast Iron, Cast Steel
Primary Function	Support for rotating shafts

Application & Usage

Common Applications

- Conveyor systems
- Agricultural machinery
- Industrial equipment
