

Pillow Block Bearing Unit

Pillow block bearing units, also known as plummer block housings, are mounted bearing units available in various configurations. These units typically consist of a housing with a bearing insert, designed to provide support for a rotating shaft.

Product Overview

Industrial Pillow Block Bearing Unit

Pillow block bearing units, frequently referred to as plummer blocks, are essential mounted bearing assemblies designed to provide reliable support for rotating shafts. These units integrate a precision bearing insert within a robust housing, making them ideal for a wide range of industrial machinery. Pre-lubricated and fully sealed for immediate installation, they effectively reduce friction and support demanding mechanical loads.

Technical Specifications

Maintenance

Pre-lubricated • Sealed • Ready to Install

Model Identifier

P206

Housing Material

Cast Iron, Pressed Steel
