

# Pipe Base Well Screen for Filtration

This pipe base well screen provides efficient filtration and separation. Its durable construction ensures long-lasting performance and resistance to corrosion.

## ADDITIONAL IMAGES

## Product Overview

### High-Performance Filtration Solution

This pipe base well screen is engineered for high-efficiency filtration and separation in demanding industrial environments, including water wells and oil and gas production. The system consists of a precision-perforated base pipe combined with a high-strength slip-on screen, designed to balance flow capacity with structural integrity. Each unit is custom-manufactured to specific diameter, length, and gauge requirements to minimize pressure drop and prevent clogging.

## Technical Construction

### System Components

- Perforated base pipe (casing/tubing)
- Slip-on wedge wire screen

<b>Construction Type</b>	Slip-on type pipe base screen
<b>Base Pipe Standards</b>	API Specifications

## Performance Features

### Key Benefits

Minimal pressure drop • Optimized flow-capacity • Corrosion resistance • Custom engineered

<b>Flow Optimization</b>	Yes
