

Pipe Cutting Machine

This pipe cutting machine is designed for precise and efficient cutting of pipes. It features a robust frame, a high-speed cutting wheel powered by an electric motor, and a hydraulic system for controlled cutting pressure.

Overview

Precision Pipe Cutting Solution

This pipe cutting machine is engineered for precise and efficient cutting across various pipe diameters. Featuring a robust frame and a reliable electric motor, it ensures clean, accurate cuts suitable for demanding industrial and construction environments. With adjustable rollers for secure support and alignment, this machine provides consistent performance and controlled cutting pressure for high-quality results.

Performance Metrics

Cutting Capacity Range

40 mm

Min Diameter (Model A)

280 mm

Max Diameter (Model A)

80 mm

Min Diameter (Model B)

350 mm

Max Diameter (Model B)

Technical Specifications

Technical Data

| Feature | Specification |
|------------------------|---------------|
| Max Cutting Thickness | 8 mm |
| Motor Power | 0.55 kW |
| Principal Axis Speed | 23 |
| Cutting Length Support | Included |

Logistics
