

Pipe Fitting Injection Mold

This injection mold is designed for manufacturing pipe fittings. It features advanced cooling channels and a multi-cavity configuration for efficient and consistent production.

Product Overview

Precision Pipe Fitting Injection Mold

This precision-engineered injection mold is designed specifically for the high-volume manufacturing of complex pipe connections. Constructed from high-grade, hardened tool steel, it ensures exceptional durability and longevity in demanding industrial environments. The mold features advanced cooling channels for efficient temperature regulation and is compatible with various thermoplastic materials, including PVC, CPVC, and PEX.

Technical Specifications

Runner System

Cold Runner • Hot Runner

Compatible Materials

- PVC
- CPVC
- PEX

Construction Material

Hardened Tool Steel

Cavity Options

Single Cavity, Multi-Cavity

Production Features
