

Pipe Support Clamp with Fasteners

This pipe support clamp is a fastener designed for securing pipes in various applications. It is constructed from durable metal and features a split ring design for easy installation around existing pipes.

Product Overview

Robust Pipe Support Solution

This pipe support clamp is a professional-grade fastener engineered for reliability in demanding industrial and construction environments. Featuring a durable metal construction with a corrosion-resistant yellow finish, it is designed for long-term stability in various piping systems. The split-ring design allows for quick and efficient installation, while the integrated threaded rod system ensures precise vertical adjustment and support.

Technical Specifications

Fastening Mechanism

- Dual bolt and nut tightening system
- Central threaded rod for vertical adjustment

Design Type	Split Ring
Finish	Corrosion-resistant yellow

Applications

Suitable Piping Systems	Water Pipes, Gas Lines, Electrical Conduits
-------------------------	---

Performance Features

Key Performance Benefits

Vibration Damping • Sag Prevention • Corrosion Resistant • Easy Installation
