

Piping System Flange

Flanges are essential components in piping systems, facilitating connections between pipes, valves, pumps, and other equipment. Different types like welding neck and socket welding flanges offer specific advantages for various applications.

Product Overview

Industrial Piping Flanges

Piping system flanges are essential components designed to facilitate secure connections between pipes, valves, pumps, and other critical equipment. This versatile range includes various configurations such as welding neck, socket welding, threaded, lap joint, blind, plate, and slip-on types. Each design offers specific advantages tailored to different industrial applications, ensuring reliability under varying pressure and temperature conditions.

Available Types

Available Flange Configurations

- Welding Neck Flange
- Socket Welding Flange
- Threaded Flange
- Lap Joint Flange
- Blind Flange
- Plate Flange
- Slip-on Flange

Application Context

Primary Applications

Piping Systems, Valve Connections, Pump Integration, Equipment Assembly
