

Piping System Flanges

These high-quality flanges are designed for robust connections in piping systems. They provide secure and leak-proof sealing, which ensures efficient and safe operations.

Overview

Industrial Piping System Flanges

These professional-grade flanges are engineered to provide secure and leak-proof connections across a variety of demanding industrial piping systems. Designed for versatility, the range includes multiple types such as slip-on, welding neck, and blind flanges to accommodate diverse engineering requirements. Manufactured to meet rigorous international standards including ANSI, JIS, DIN, and EN, these components ensure dimensional accuracy and structural integrity for critical infrastructure projects.

Technical Specifications

Standards Compliance

- ANSI B16.5
- JIS B2220
- DIN 2573
- UNI 2278
- EN1092-1

Available Types

Slip-on, Welding Neck, Socket Welding, Threaded, Lap Joint, Blind

Performance

Working Pressure Ratings

PN6 • PN10 • PN16
