

Piston Assembly with Rings and Wrist Pin

This piston assembly includes a piston, piston rings, a wrist pin, and retaining clips. The assembly is designed for use in internal combustion engines, providing a critical component for converting combustion energy into mechanical work.

Product Overview

High-Performance Piston Assembly

This comprehensive piston assembly is engineered for internal combustion engines, serving as a critical component for converting combustion energy into mechanical work. The set includes a precision-machined piston, a complete array of piston rings, a durable wrist pin, and necessary retaining clips. Designed for reliability and optimal sealing, this assembly ensures efficient power transfer from the piston to the crankshaft.

Technical Specifications

Included Components

- Piston
- Piston Rings (Compression & Oil Control)
- Wrist Pin
- Retaining Clips

Key Features

Precision Bore, Optimized Ring Grooves, High-Strength Wrist Pin, Internal Combustion Compatible

Performance Metrics

Core Function

Sealing • Lubrication • Power Transfer
