

Piston Pin for Internal Combustion Engines

This piston pin is designed for use in internal combustion engines. It is precision-machined from hardened steel, providing optimal wear resistance and durability.

Product Overview

High-Performance Piston Pin

This high-strength piston pin is specifically engineered for internal combustion engines, providing a critical link between the piston and connecting rod. Precision-machined from hardened steel, it offers exceptional wear resistance and long-term durability under demanding operating conditions. The component features a smooth surface finish designed to minimize friction, thereby enhancing overall engine performance and efficiency.

Technical Specifications

Key Benefits

- High-strength construction
- Optimal wear resistance
- Reduced friction
- Enhanced engine performance

Material	Hardened Steel
Surface Finish	Precision-machined, smooth finish
Application	Internal Combustion Engines
