

Piston Ring Set for Internal Combustion Engines

This set of piston rings is designed for internal combustion engines. The rings ensure a tight seal in the combustion chamber, manage oil consumption, and facilitate heat transfer from the piston.

Product Overview

High-Performance Piston Ring Set

This precision-engineered piston ring set is designed for internal combustion engines, ensuring optimal performance and longevity. The set includes essential components such as compression rings, oil control rings, and expander rings to maintain engine integrity. These rings effectively seal the combustion chamber, regulate oil consumption, and facilitate efficient heat transfer from the piston to the cylinder wall.

Technical Specifications

Included Components

- Compression rings
- Oil control rings
- Expander rings

Key Functions

Combustion Sealing • Oil Control • Heat Transfer

Material

Cast Iron, Steel
