

Piston Ring Set for Internal Combustion Engines

This piston ring set is designed for use in internal combustion engines. It includes multiple rings that seal the combustion chamber, control oil consumption, and transfer heat.

Product Overview

High-Performance Piston Ring Set

This precision-engineered piston ring set is designed for internal combustion engines, ensuring optimal sealing and performance. Each set includes a comprehensive array of rings, including compression rings, oil control rings with expanders, and scraper rings, all crafted to withstand extreme temperatures and friction. By effectively sealing the combustion chamber and managing oil consumption, these rings are essential for maintaining engine efficiency and longevity.

Technical Specifications

Ring Types Included

- Compression rings
- Oil control rings with expanders
- Scraper rings

Durability Features

High Temperature Resistance • Precision Engineered • High Pressure Tolerance

Primary Applications

Internal Combustion Engines, Combustion Chamber Sealing, Oil Control, Heat Transfer
