

Plain Trolley for Horizontal Beams

This plain trolley is a material handling solution for moving loads along a horizontal beam. Its durable construction and precision ball bearings ensure long-lasting performance and smooth operation.

Overview

GCT 616 Series Plain Trolley

The GCT 616 Series Plain Trolley is a robust material handling solution engineered for the smooth and efficient movement of loads along horizontal beams. Designed for manual operation, it offers precise control over load positioning, making it an ideal choice for workshops, warehouses, and construction sites. The trolley features high-quality steel construction and precision ball bearings to ensure durability, reduced friction, and effortless rolling performance.

Key Specifications

Rated Capacity

1 ton
Capacity

Operation: Manual

Trolley Type: Plain

Design & Features

Adjustable Features

- Adjustable wheel carriage
- Accommodates various beam widths

Material: High-quality steel

Bearing System: Precision ball bearings

Applications

Suitable Environments: Workshops, Warehouses, Construction Sites
