

# Planer Knife Alignment Jig

This planer knife setting jig is designed for precise and repeatable knife positioning. It enables accurate alignment of planer knives for consistent cutting performance and reduced vibration.

## Overview

### Precision Alignment Solution

This planer knife setting jig is engineered to ensure precise and repeatable knife positioning within planer heads. By facilitating accurate alignment, it helps maintain consistent cutting performance while effectively reducing operational vibration. Designed for durability and reliability, it features adjustable height settings and a robust clamping mechanism to securely hold knives during installation.

## Key Features

### Key Benefits

- Precise and repeatable knife positioning
- Consistent cutting performance
- Reduced operational vibration
- Adjustable height settings
- Robust clamping mechanism

### Compatibility

Various planer models, Multiple knife sizes

## Construction

### Build Quality

Durable Materials • Long-lasting • Reliable
