

Planetary Concrete Mixer for Uniform Mixing

This planetary concrete mixer is engineered for producing high-quality concrete mixes. Its design ensures materials are thoroughly homogenized, leading to consistent and reliable concrete batches.

Overview

High-Performance Planetary Mixing

The QMP Series Planetary Concrete Mixer is engineered for high-speed, uniform mixing of various concrete types, including hard, semi-hard, and plastic concrete. Its specialized planetary mixing device ensures faster, more consistent homogenization while maintaining durability under harsh conditions. Beyond concrete, this versatile equipment is suitable for processing glass, ceramic, and refractory materials, offering a robust solution for diverse industrial applications.

Key Features

Design Advantages

- Specially designed mixing device for faster, even mixing
- Wear-resistant mixing blades
- Flexible couplings and optional fluid coupler for overload protection
- Specialized gearbox for efficient, low-noise power distribution
- Large-size access door for maintenance and cleaning

Suitable Materials

Concrete, Glass, Ceramic, Refractory Materials

Optional Equipment

Available Upgrades

Fluid Coupler • High Pressure Cleaning Device • Water Content Tester
