

Plant Protection Nonwoven Fabric

Lightweight, breathable nonwoven fabric is designed for plant protection in gardens and agricultural settings. This fabric acts as a barrier against pests, insects, and birds, while also providing frost protection and creating a microclimate that promotes faster plant growth.

Product Overview

Professional Plant Protection

This lightweight, breathable nonwoven fabric is engineered for optimal plant protection in both garden and agricultural environments. It acts as an effective barrier against pests, insects, and birds while simultaneously providing essential frost protection. By creating a favorable microclimate, it promotes faster plant growth and allows for an extended growing season.

Material & Durability

Material Composition	100% New Material
Surface Treatment	UV Treated

Performance Features

Key Benefits

- Breathable structure
- Permeable to air, water, and sunlight
- Pest and insect barrier
- Frost and harsh weather protection
