

Plasma Cutting Machine with IGBT Inverter

This plasma cutting machine is engineered for efficient and precise metal cutting. It incorporates an IGBT inverter to ensure stable and reliable performance, making it suitable for a variety of metal-cutting applications.

Overview

Professional Plasma Cutting Performance

This LGK 100 plasma cutting machine utilizes advanced IGBT inverter technology to deliver stable and reliable metal cutting performance. Designed for both workshop and on-site versatility, it features a compact, portable frame that doesn't compromise on power. The integrated digital display allows operators to monitor and adjust settings precisely, ensuring optimal cutting results across a variety of metal types.

Technical Specifications

Model	LGK 100
Inverter Technology	IGBT

Features

Safety Compliance

Operator Protection • Stable Performance

Key Features

IGBT Inverter, Digital Display, Portable Design, Adjustable Settings

Applications

Suitable Environments

- Professional Workshops
- On-site Construction
- Metal Fabrication
