

Plasma Television with Integrated Soundbar

This plasma television provides superior color and dynamic high-definition visuals. Its all-digital process ensures no signal loss.

Overview

Advanced Plasma Display Technology

This plasma television utilizes advanced gas discharge technology, employing ray-excited phosphors to deliver high-quality visual performance. The display mechanism functions similarly to fluorescent lighting, relying on the ionization of gas molecules to create light. This sophisticated engineering ensures consistent, vibrant image reproduction suitable for modern entertainment environments.

Design & Features

Integrated Audio	Yes
Design Style	Modern sleek black design

Technical Specifications

Operating Principle

- Ray excited phosphors
- Gas molecule ionization
- Impact ionization process

Display Technology	Plasma Gas Discharge
