

Plastic Bottle Blowing Machine

This plastic bottle blowing machine is a robust and efficient solution for producing plastic bottles. The machine features a multi-cavity design and incorporates advanced control systems for precise temperature regulation, ensuring consistent bottle quality.

Overview

High-Efficiency Bottle Production

The CM-18A is a robust and efficient solution engineered for high-volume plastic bottle production. Featuring a multi-cavity design and advanced temperature regulation systems, it ensures consistent quality across every unit. Its compact footprint optimizes floor space, making it an ideal choice for diverse production environments seeking durability and reduced downtime.

Key Features

Model Number	CM-18A
Application	5-Gallon Bottle Blowing

Performance Metrics

Performance Highlights

1 System

Multi-Cavity Design

Operational Capabilities

System Features	Advanced Temperature Control, User-Friendly Interface, Compact Footprint, High-Volume Production
