

Plastic Container Blow Molding Machine

This blow molding machine is designed for efficient production of plastic containers. It features precise temperature control and an automated ejection system for optimized cycle times.

Overview

High-Performance Blow Molding Solution

This blow molding machine is engineered for the efficient, high-volume production of plastic containers, including bottles and jars. It features a robust frame construction and advanced control systems designed to optimize cycle times and minimize material waste. Built for durability and ease of maintenance, this equipment ensures consistent output and long-term reliability for demanding industrial manufacturing environments.

Technical Specifications

Model Number	CSD-EB65J2-A2-2
Suitable Applications	Bottles, Jars, Hollow Plastic Products

Key Features

Core Capabilities

- Precise temperature control
- Automated ejection system
- Optimized material usage
- Robust frame design

Maintenance Profile

Easy Maintenance • High Reliability
