

Plastic Extrusion Die

This high-precision plastic extrusion die is designed for producing multi-layered plastic sheets or films. It features a modular design with multiple adjustable slots for controlling the flow and thickness of each layer.

Product Overview

High-Precision Extrusion Solution

This high-precision plastic extrusion die is engineered specifically for the production of multi-layered plastic sheets and films. Its modular architecture features adjustable slots that allow operators to precisely control the flow and thickness of each material layer. Built from high-grade steel with precision-machined surfaces, this die ensures uniform material distribution and consistent, high-quality output for a variety of thermoplastic applications.

Technical Specifications

Operational Features

- Multi-layer sheet/film production capability
- Sophisticated clamping system
- Leak-proof operation
- Uniform material distribution

Material Construction

High-grade steel

Design Features

Modular Design, Adjustable Slots, Precision-Machined Surfaces

Compatibility

Suitable Materials

Thermoplastics
