

Plastic Extrusion Line

This high-performance plastic extrusion line is designed for continuous production. The system features a multi-stage processing line with advanced temperature control and a water-cooling system.

Overview

High-Performance Plastic Extrusion System

This high-performance plastic extrusion machinery is engineered for continuous, reliable production of various plastic products. The integrated multi-stage line encompasses material feeding, precision extrusion, rapid cooling, and centralized control units. Designed for versatility, this system is suitable for manufacturing a wide range of plastic profiles, pipes, and sheets with consistent output.

Technical Specifications

System Components

- Material feeding unit
- Extrusion unit
- Cooling section
- Control panel

Cooling System

Water-cooling system

Performance Features

Suitable Applications

Plastic Profiles • Pipes • Sheets

Key Features

Continuous Production, High-Torque Drive, Advanced Temperature Control, Precision Monitoring
