

Plastic Extrusion Line

This extrusion line is designed for plastic processing. It features multiple feeding hoppers and a segmented barrel.

Overview

High-Efficiency Plastic Extrusion System

This professional-grade plastic extrusion line is engineered for continuous, high-volume production of plastic profiles or pellets. The system features a robust, segmented barrel design that ensures precise material processing and consistent output quality. Equipped with integrated material feeding hoppers and centralized control interfaces, it offers streamlined operation for demanding industrial manufacturing environments.

System Configuration

Core Components

- Multiple material feeding hoppers
- Conveying tube system
- Extrusion unit with segmented barrel
- Integrated control panel
- Continuous output section

Control System

Integrated Control Panel

Performance

Production Capability

Continuous Production, Profile Extrusion, Pelletizing
