

Plastic Extrusion Machine

This plastic extrusion machine is designed for manufacturing plastic products. It consists of a feeding hopper, an extruder, a cooling system, and a haul-off unit.

Overview

High-Efficiency Plastic Extrusion System

This industrial-grade plastic extrusion machine is engineered for versatile manufacturing of plastic products, including pipes, profiles, sheets, and films. The system integrates a precise feeding hopper, a high-performance extruder, a robust cooling system, and a controlled haul-off unit to ensure consistent output quality. Designed for reliability, this machinery streamlines the melting, shaping, and solidification process to meet demanding production standards.

Technical Specifications

Core Components

- Feeding Hopper
- Extruder Unit
- Cooling System
- Haul-off Unit

Production Capabilities

Pipes, Profiles, Sheets, Films
