

Plastic Extrusion Machine

This plastic machinery extrudes plastic materials into various shapes and profiles. It is equipped with a control panel for adjusting parameters such as temperature, speed, and pressure.

Overview

Professional Plastic Extrusion Solution

This industrial-grade plastic extrusion machine is engineered for high-efficiency production of various plastic shapes and profiles. The system integrates a comprehensive feeding mechanism, a multi-zone heating extrusion unit, and precise cooling and haul-off stages to ensure consistent output quality. Equipped with an advanced control panel, operators can easily monitor and adjust critical parameters like temperature, speed, and pressure for optimal manufacturing results.

Technical Capabilities

Key Machine Components

- Feeding System
- Multi-zone Heating Extrusion Unit
- Cooling System
- Haul-off Unit
- Integrated Control Panel

Suitable Applications

Plastic Pipes, Profiles, Plastic Sheets

Control & Operation

Adjustable Parameters

Temperature • Speed • Pressure
