

Plastic Film and Sheet Extrusion Line

This plastic film and sheet extrusion line is designed for efficient and precise manufacturing. It utilizes advanced technology for continuous operation, ensuring high output and consistent product quality with adjustable thickness and width.

Overview

High-Performance Extrusion Technology

This plastic film and sheet extrusion line is engineered for high-output, continuous manufacturing operations. Featuring advanced temperature control and automated winding systems, it ensures precise product quality while minimizing material waste. The system is designed for versatility, allowing for adjustable thickness and width settings to accommodate a wide range of plastic film and sheet production requirements.

Technical Capabilities

Key Operational Features

- Advanced extrusion technology
- Precise temperature control systems
- Automated winding mechanisms
- Continuous operation capability
- Adjustable film/sheet thickness
- Adjustable production width

Control & Monitoring

Control System

Robust Control Panel • Real-time Monitoring • Automated System
