

Plastic Film Blowing and Printing Machine

This machine produces plastic soft-packages. It can process blowing and printing simultaneously; printing is optional.

Overview

High-Efficiency Film Production

This advanced plastic film blowing and printing machine is engineered for the seamless production of high-quality plastic films. It integrates both blowing and printing capabilities, utilizing a digital corona processor to ensure excellent color fastness. Designed for modern manufacturing environments, the system features pneumatic clutch controls and supports multi-machine operation to optimize labor efficiency and throughput.

Technical Capabilities

Production Metrics

1200 mm

Max Unfold Width

4 colors

Printing Capacity

Machine Configuration

System Components

- High-stability main motor
- Industrial-grade low-voltage electrical appliances
- Precision inverter system
- Digital temperature control meter

Operational Features

Key Operational Features

Digital Corona Treatment, Pneumatic Clutch Traction, Pneumatic Clutch Printing, Multi-machine Connectivity

Warranty & Support

Warranty Period

2 years from the date of the bill of lading
