

Plastic Film Blowing Machine

This plastic film blowing machine is designed for manufacturing plastic films. It features a vertical extrusion process with a high tower structure for cooling and solidifying the blown film.

Overview

High-Efficiency Film Blowing Solution

This plastic film blowing machine is engineered for the reliable manufacturing of high-quality plastic films. Utilizing a vertical extrusion process with a specialized high tower structure, it ensures optimal cooling and solidification of the blown film. The integrated system features a user-friendly control panel, a robust extrusion unit with a material hopper, and a precision winding unit, making it an ideal solution for producing packaging and agricultural films.

Technical Specifications

Key Components

- Control Panel
- Extrusion Unit with Hopper
- Winding Unit
- Cooling Tower Structure
- Film Guiding Rollers

Extrusion Type

Vertical

Applications

Primary Uses

Packaging Film, Agricultural Film, Plastic Manufacturing
