

Plastic Film Blowing Machine

This plastic film blowing machine is designed for manufacturing plastic films. It features a multi-level structure with a complex arrangement of rollers, extruders, and control panels.

Overview

Industrial Film Production Solution

This industrial-grade plastic film blowing machine is engineered for high-efficiency manufacturing of plastic films. It features a robust multi-level structure that integrates essential components including advanced extruders, precision roller systems, and a comprehensive control interface. Designed for consistent output and quality, the system allows operators to precisely calibrate critical production parameters such as operating temperature, line speed, and film thickness.

Technical Capabilities

Key Features

- Multi-level structural design
- Integrated precision roller system
- Advanced extrusion technology
- Digital control panel for parameter adjustment

Adjustable Parameters

Temperature Control, Production Speed, Film Thickness

Application & Usage

Application Type

Plastic Film Manufacturing • Industrial Production
