

Plastic Film Blowing Machine

This plastic film blowing machine is designed for manufacturing plastic film from raw plastic materials. It uses an extrusion system, a film blowing tower with cooling, and a winding mechanism to produce films of various thicknesses and widths.

Overview

High-Efficiency Film Blowing System

This plastic film blowing machine is engineered for the reliable production of plastic film from raw materials. Featuring an integrated extrusion system, a cooling film blowing tower, and a precision winding mechanism, it is built for continuous industrial operation. The system includes a comprehensive control panel, allowing operators to fine-tune temperature, speed, and film thickness for versatile packaging, agricultural, and industrial applications.

Technical Specifications

Key Components

- Extrusion system
- Film blowing tower
- Cooling system
- Winding mechanism
- Integrated control panel

Construction

Robust Frame • High-Quality Components • Continuous Operation Ready

Suitable Applications

Packaging, Agricultural, Industrial
