

Plastic Film Extrusion Machine

This extrusion machine is designed for producing plastic film or bags. It features a multi-level structure with rollers, tensioning systems, and a control panel, suitable for continuous operation.

Overview

High-Performance Film Extrusion

This plastic film extrusion machine is engineered for continuous, high-volume production of plastic films and bags. Featuring a robust multi-level structure, it integrates advanced tensioning systems and a precision-engineered extrusion die area. Designed for reliability, this equipment supports efficient industrial workflows and consistent film quality.

Technical Features

Key Capabilities

- Continuous operation capability
- High-volume production output
- Integrated film winding mechanism
- Precision tensioning control

Construction	Multi-level industrial framework
Primary Applications	Plastic Film Production, Bag Manufacturing, Industrial Extrusion
