

# Plastic Film Production Line

This high-performance machinery is designed for efficient plastic film production. The system includes an extrusion unit, a vertical film tower, and a winding mechanism.

## Overview

### High-Performance Plastic Film Production

This high-performance packaging machinery is engineered for the efficient and consistent production of plastic film. Featuring an integrated extrusion unit with a hopper, a vertical film tower for precise cooling and shaping, and a robust winding mechanism, this system ensures high throughput for flexible packaging materials. It is equipped with a centralized control panel for accurate parameter adjustments and operational reliability.

## Technical Specifications

### Key System Components

- Extrusion unit with hopper
- Vertical film cooling and shaping tower
- Winding mechanism for roll formation
- Centralized control panel

### Primary Application

Flexible Packaging, Plastic Film Production, Industrial Manufacturing

## Operational Features

### Performance Highlights

**1 High**

Production Consistency
