

Plastic Film/Sheet Production Line

This plastic machinery line is designed for the production of plastic films or sheets. The line consists of modules for feeding, extrusion, cooling, printing, and winding or cutting, ensuring consistent thickness and properties.

Overview

High-Efficiency Plastic Film & Sheet Production

This industrial-grade production line is engineered for the precise manufacturing of high-quality plastic films and sheets. The modular system integrates advanced material feeding, extrusion, cooling, and finishing processes to ensure consistent thickness and material properties. Equipped with automated control panels and real-time sensors, this machinery offers reliable performance for demanding industrial applications.

System Modules

Key Modules

- Material Feeding System (Hopper)
- Extrusion Unit
- Cooling & Solidifying Section
- Printing/Coating Unit
- Winding & Cutting Station

Control & Monitoring

Control Features

Automated Control Panels, Process Parameter Monitoring, Precision Sensors

Performance Metrics

Production Capabilities

1 Yes

Consistent Thickness Control
