

Plastic Injection and Blow Molding Machine

This industrial machine is designed for manufacturing plastic products through injection and blow molding. It is equipped with a material hopper, control panel, and a molding section featuring a protective enclosure.

Product Overview

Industrial Injection and Blow Molding Solution

This industrial-grade injection and blow molding machine is engineered for high-volume production of plastic containers and components. Designed for efficiency in the plastic and rubber manufacturing industry, it features an integrated material hopper, a user-friendly control panel with screen interface, and a robust, protective molding enclosure. The MSZ25 model provides reliable performance for demanding production environments.

Technical Specifications

Industry Application

Plastic Manufacturing • Rubber Processing • Container Production

Model Number	MSZ25
Process Type	Injection Molding, Blow Molding

Key Features

Key Features

- Integrated material hopper
- Advanced digital control panel
- Protective safety enclosure
- High-volume production capability
