

Plastic Injection Mold for Appliance Components

This injection mold is used to form plastic components for appliances. It is suitable for manufacturing parts in washing machines and air conditioners.

Product Overview

Precision Appliance Component Molds

These high-quality plastic injection molds are engineered for the demanding production of appliance components, including specialized parts for washing machines and air conditioning units. Leveraging years of design expertise and rigorous testing, these molds ensure consistent dimensional accuracy and high-volume reliability. Each unit is managed under strict quality control protocols to meet the precise requirements of modern manufacturing applications.

Manufacturing Standards

Management Systems

- ERP Integrated Process Control
- Standardized Quality Management
- Continuous Process Innovation
- Dedicated R&D Technical Support

Quality Certifications

ISO 9001:2008

Technical Capabilities

Industry Applications

- Washing machine components
- Air conditioner parts
- Automotive assembly parts
- Semiconductor and IC connector components
- Motor fixed rotors

Tooling Capabilities

Plastic Injection Mold • Die Casting Mold • Die Parts
