

Plastic Injection Mold

This plastic injection mold is designed for manufacturing plastic parts. It features multiple cavities, ejector pins, and cooling channels.

Overview

Precision Injection Mold

This high-precision plastic injection mold is engineered for high-volume manufacturing environments. Featuring a multi-cavity design, it optimizes production efficiency while maintaining strict dimensional accuracy for consistent part quality. The robust metal construction incorporates advanced cooling channels and ejector pin systems to ensure reliability during long production runs.

Technical Details

Key Design Features

- Multi-cavity configuration
- Integrated ejector pin system
- Precision cooling channels
- Optimized material flow channels

Construction Material	Durable Industrial-Grade Metal
