

Plastic Injection Molded Component with Buttons

This is an injection-molded part, likely a cover or housing component for a piece of equipment. Two buttons, one green and one red, are integrated into the design, suggesting a control or interface function.

Product Overview

Precision Molded Interface Component

This precision-engineered injection-molded component serves as a durable housing or interface panel for industrial equipment. Featuring an integrated dual-button control system, it provides a high-quality tactile interface for end-user operation. Its light gray finish and clean rectangular design make it a versatile choice for a wide range of electronic and mechanical assemblies.

Technical Specifications

Button Configuration

- Green (Function 1)
- Red (Function 2)

Production Method

Precision Injection Molding

Material Color

Light Gray

Integrated Features

Tactile Buttons, Control Interface, Identification Label Area
