

# Plastic Injection Molding Machine

This injection molding machine is designed for precision in plastic part manufacturing. Its robust clamping and advanced hydraulics ensure efficient and accurate production of various plastic products.

## Overview

### High-Performance Injection Molding

This high-performance injection molding machine is precision-engineered for the manufacturing of complex plastic components. It features a robust clamping system paired with an advanced hydraulic architecture to ensure consistent, high-efficiency production. Designed for reliability in demanding industrial environments, this machine delivers the accuracy required for high-volume plastic part manufacturing.

## Key Metrics

### Performance Highlights

**7500 kN**

Series Capacity

Series

YJT 7500

## Technical Specifications

### Core Systems

- Robust clamping system
- Advanced hydraulic system
- User-friendly control interface

Application Suitability

Precision Manufacturing, High Efficiency, Industrial Production
