

# Plastic Injection Molding Machine

This injection molding machine is engineered for producing plastic parts with precision and efficiency. It features advanced control systems and robust construction for reliable operation.

## Machine Overview

### High-Performance Injection Molding Solution

This injection molding machine is engineered for high precision and consistent performance in industrial plastic manufacturing. Featuring a robust clamping system and advanced energy-saving capabilities, it is designed to meet the rigorous demands of automotive, electronics, and consumer goods sectors. Its user-friendly interface allows for precise control over the molding process, ensuring high-quality output and operational efficiency.

Opening Stroke

590 mm

Key Features

Servo Energy Saving, Precision Control, Robust Construction, Industrial Grade

## Technical Performance

### Clamping Force

**300 ton**

Clamping Force

### Injection Specifications

Parameter	Option 1	Option 2	Option 3
Screw Diameter (mm)	60	65	70
Shot Weight (g)	772	905	1050
Injection Capacity (cm <sup>3</sup> )	848	995	1154
