

Plastic Injection Molding Machine

This injection molding machine is designed for precision in plastic part manufacturing. It utilizes an advanced hydraulic system and user-friendly interface for efficient operation and easy programming.

Overview

High-Performance Injection Molding Solution

This injection molding machine is engineered for precision plastic part manufacturing, utilizing a robust clamping system for secure mold closure and high-accuracy injection control. It incorporates an advanced hydraulic system to facilitate smooth operation and minimize cycle times in demanding production environments. Designed for versatility, it supports a wide range of thermoplastic materials to ensure consistent part quality.

Technical Specifications

Clamping Force

7500 ton

Clamping Force

Injection Performance

| Screw Diameter | Shot Weight | Injection Capacity |
|----------------|-------------|--------------------|
| 90 | 2603 | 2861 |
| 95 | 2901 | 3188 |
| 105 | 3543 | 3894 |

Opening Stroke

950 mm
