

Plastic Injection Molding Machine

This injection molding machine is designed for producing high-quality plastic parts. It features a robust clamping unit, precise injection system, and advanced control panel for efficient and accurate operation.

Product Overview

High-Performance Plastic Injection Molding

This high-performance injection molding machine is precision-engineered for the consistent production of high-quality plastic parts. Equipped with a robust clamping unit and a highly accurate injection system, it ensures reliability and efficiency for demanding manufacturing environments. The advanced control panel simplifies operation, allowing for precise control over the production cycle and maintaining excellent product quality throughout high-volume runs.

Technical Specifications

Application Focus

- High-quality plastic part manufacturing
- Consistent quality production
- Versatile plastic product range

Model Series	BL 120 EK
Control System ID	C 430
Key Features	Robust Clamping Unit, Precise Injection System, Advanced Control Panel, High Productivity
