

Plastic Injection Molding Machine

This injection molding machine is designed for manufacturing plastic parts with precision. It features an advanced control panel and robust hydraulic system for efficient and reliable operation.

ADDITIONAL IMAGES

Overview

High-Performance Injection Molding Solution

This industrial-grade injection molding machine is engineered for the precise manufacturing of thermoplastic and thermosetting plastic products. Designed for high-volume production, it features an advanced control interface and a robust hydraulic system to ensure tight tolerances and consistent quality. The machine is fully equipped with integrated safety monitoring and automated material feeding systems to optimize operational efficiency.

Technical Specifications

Model	YH130
Machine Configuration	Horizontal Injection Molding

System Components

Integrated Systems

- Injection System
- Mold Closing System
- Hydraulic Transmission System
- Electrical Control System
- Lubrication System
- Heating and Cooling System
- Safety Monitoring System

Operational Features

Key Operational Features	Precision Manufacturing, Automated Material Feeding, High-Volume Production, Advanced Control Panel, Safety Interlocks
