

# Plastic Injection Molding Machine

This high-performance plastic injection molding machine is designed for efficient and precise manufacturing. The machinery integrates a robust hydraulic system, a user-friendly control interface, and a high-capacity material feeding system.

## Overview

### High-Performance Injection Molding

This advanced plastic injection molding machine is engineered for high-efficiency and precise manufacturing of plastic components. It integrates a robust hydraulic system with a user-friendly control interface and a high-capacity material feeding system. Designed for stability and durability, the machinery ensures consistent production quality while minimizing operational downtime for a wide range of processing applications.

## Technical Specifications

### Clamping Force

**160 Tons**

Clamping Force

### Series Model

UN160SK

## Key Features

### Key Features

- Robust hydraulic system
- High-capacity material feeding system
- User-friendly control interface
- High-stability structural design

### Application Suitability

Plastic Processing, High-Precision Manufacturing, Industrial Production
