

# Plastic Injection Molding Machine

This injection molding machine provides a high-performance and energy-efficient solution for manufacturing plastic parts. It features a robust clamping system, a precise injection unit, and an advanced control system for consistent and reliable operation.

## Overview

### High-Performance Injection Molding

The YJK2000 series injection molding machine is engineered for high-performance plastic part manufacturing, emphasizing energy efficiency and consistent operation. It features a robust clamping system and a precise injection unit, making it suitable for a wide variety of thermoplastic materials. With a user-friendly interface and modular design, this machine offers customizable production solutions that prioritize both part quality and operational productivity.

## Technical Specifications

Series Model	YJK2000
Compatible Materials	Thermoplastics

## Key Features

### Performance Highlights

**2000 kN**

Series Capacity Rating

### Design Advantages

- Energy-saving technology
- High-speed injection system
- Optimized screw design
- Modular construction for customization

### Operational Features

Energy Efficient • High-Speed • Customizable • User-Friendly
