

Plastic Injection Mould

This plastic injection mould is designed for creating parts with specific shapes and dimensions. It features a rectangular base with perforations and ribbed vertical walls.

Product Overview

Precision Industrial Moulding Component

This high-quality plastic injection mould is engineered for durability and precision in industrial manufacturing environments. Featuring a robust rectangular base with intricate perforations and raised cylindrical structures, it is designed to facilitate complex assembly or production processes. The inclusion of vertical ribbed walls and integrated mounting points ensures stability and ease of installation within existing machinery setups.

Physical Characteristics

Base Geometry	Rectangular
Finish	White
Key Features	Perforated Base, Raised Cylindrical Structures, Vertical Ribbed Walls, Mounting Points

Application Details

Primary Application	Industrial machinery component
Mounting Capability	Yes
