

Plastic Intake Manifold for Plastic Machinery

This plastic intake manifold is designed for use in plastic machinery. It features a multi-port design with multiple runners for efficient air distribution.

Product Overview

High-Performance Plastic Intake Manifold

This plastic intake manifold is specifically engineered for integration into plastic machinery, ensuring efficient air distribution through its multi-port runner design. Constructed from durable, industrial-grade plastic, it provides reliable performance even in demanding operational environments. The unit features integrated mounting points to facilitate secure and stable installation for long-term use.

Technical Specifications

Application

Plastic Machinery

Part Identification

2964::722

Construction Material

Industrial-grade durable plastic

Design Features

Multi-port design, Multiple runners, Integrated mounting points
