

Plastic Pipe and Profile Extrusion Line

Complete plastic extrusion lines manufacture plastic pipes and profiles. The machinery includes feeding, extrusion, cooling, calibration, haul-off, cutting, and stacking units.

Overview

High-Efficiency Extrusion Solution

This complete plastic extrusion line is engineered for the high-volume manufacturing of plastic pipes and profiles. The system integrates feeding, extrusion, cooling, calibration, haul-off, cutting, and stacking units into a seamless workflow. It is designed to provide manufacturers with precise control over both product dimensions and material properties, ensuring consistent quality output.

Technical Specifications

Integrated System Components

- Material Feeding Unit
- Extrusion Unit
- Cooling System
- Calibration Unit
- Haul-off Unit
- Cutting Unit
- Stacking Unit

Application Focus

Plastic Pipes, Plastic Profiles, High-Volume Production
