

Plastic Processing Machinery

This machinery is used in the processing of plastic materials for various industrial applications. It facilitates the transformation of raw plastics into finished products.

Overview

Industrial Vertical Mast Lift

This vertical mast lift is engineered for efficiency and safety in industrial environments, such as warehouses and manufacturing facilities. Featuring a telescoping mast design and a stable, compact base, it provides reliable access to elevated work areas for maintenance and installation tasks. The integrated work platform is fully enclosed with safety railings to ensure operator security during operation.

Technical Specifications

Safety Features

- Enclosed work platform
- Safety railings
- Outriggers for stability

Model Designation	GTS7
Equipment Type	Vertical Mast Lift
Typical Applications	Maintenance, Repair, Installation, Warehousing, Factory Operations
